DAV NORDIC A/S

Harmonious and light cover with focus on functionality

The covers from DAV NORDIC have a simple and elegant design that easily integrates the necessary needs. By choosing these covers, you ensure a uniform and recognizable design.

Principle of design

The construction of the cover is carried out in a galvanized steel structure in a Y-shaped form.

The design language focuses on clean lines and an understated lightness so that the construction appears harmonious and calm. The construction supports the function, so it appears both elegant and functional.

The version with solar panels has a special focus on highlighting and complementing the solar panels so that they are actively contributing to the general design language. As the result, the solar panels make up the finished roof.

With the option of solar panels, you are given the opportunity to signal your focus on the transition to green energy. This is a great way to combine functionality and eco-friendly values.

ROOF

As standard, the roof of the cover either consists of double layer thermoplastes, sedum plant roof, or solar panels.

The solar panel roof is designed in collaboration with Polar Solaris, who have 10 years of experience in designing, incorporating, and implementing solar panels in constructions.

MARKETING POSSIBILITIES

With its many flat surfaces, the cover makes it easy to integrate professional marketing into the original design of the covers. In addition, the flat surfaces also make your marketing visible from afar.

POSSIBILITY OF INTEGRATING LIGHTING

Lights under the covers increases safety and security for users. Therefore, there are various options for mounting and integrating lighting into the covers. Among other solutions, the lighting can be integrated in the form of a luminaire with the same dimensions as the roof. The choice is entirely up to the customer's preferences.

INTERNAL DRAINAGE SYSTEM

In one of its pillars, the construction hides an integrated drainage system. The solution is intended for the drainage to exit from the column below ground level and has a hidden connection to the area's drainage system.

On the roof of the construction, the cover has a central gutter dimensioned in a convenient width for manual cleaning by hand.

CONSTRUCTION AND SURFACE TREATMENT

As standard, covers from DAV NORDIC are produced in a galvanized steel version. The combination of steel and surface treatment makes the product highly resistant and operational.

If preferred, it's possible to paint the construction in an optional RAL color with an anti-graffiti surface.
