

NEW CE MARKED BRIDGE GUARDS

In January 2019, DAV NORDIC A/S launched two new CE marked bridge guards, and as the only one in Denmark can now offer a guard series in H2 with 3 working widths.

Greater and smaller deflection

With a total of 3 working widths in the H2 class, DAV NORDIC can now offer 100% targeted bridge guard for the projects, and this offers savings for customers.

With H2W1 and H2W3, bridge guards with minimal deflection and bridge guards with a larger deflection than the known solution, H2W2 can be supplied. H2W1 can be used for bridges with e.g. noise screens where there is no room for large deflection, and H2W3 with a working width of 1 m allows for a more flexible and cheaper solution.

DAV NORDIC 90 years and specialist

DAV NORDIC specialises in road safety. In 1951, the company achieved an international breakthrough with the invention of the crash barrier, which is used throughout the world today.
