

FOOTBRIDGES FROM DAV NORDIC

Different bridges for different purposes

Bridges from DAV NORDIC come in many shapes, sizes, and materials. Each bridge is designed and installed based on your wishes and needs. We supply bridges in metal, concrete, and wood, depending on the requirements.

We have completed several projects where we delivered an entire bridge, both in steel and wood, which makes installation relatively quick since the bridge arrives in one piece. Among other things, we supplied a pedestrian bridge for Universitetsstien in Roskilde, which runs along the railway. This meant additional safety requirements, which are already part of the process when transporting and installing a 19-metre steel bridge.

In some situations, a steel bridge may not fit into the surrounding environment. In such cases, we can supply wooden bridges, which can also be delivered in one piece. For wooden bridges, it is sometimes faster, cheaper, and easier to replace the entire bridge than to repair it. This was the case when we delivered a wooden bridge to Hvidovre Municipality for a green area.
