

# SYSTEMSPENGLER - TYPE 115

The Spengler Type 115 concrete barrier provides a high level of safety. It has a safety class of H1 and a working width starting from W2 according to EN 1317-2. The barrier dimensions are L 350 x W 68 x H 115 cm.

## Applications

- Spengler Type 115 is used to:
- separate and secure moving traffic
- provide optimal protection of work zones on busy road sections
- protect road users from collisions with fixed objects located close to the carriageway
- act as a traffic barrier on hazardous road sections

## Flexible solution

- for planning and designing traffic safety barriers
- for delivery and installation
- for integration with other types of safety barriers
- for level differences between road surfaces
- for transitions across other road infrastructure installations
- for repairs and replacements

## Safety

- high impact resistance
- reduced damage in the event of collisions
- protection of other road infrastructure installations
- improved safety for road users

## Advantages

- flexible and movable elements made of reinforced concrete
- low element height with a robust surface and long lifespan
- easy to repair and maintain
- high supplier service level
- cost-effective in terms of purchase and repairs
